

Font used in project can be downloaded from this link: <http://www.dafont.com/abstract.font>

To start modifying, open the "Logo" composition from the project window. Just drag and drop your logo, scale it to fit to comp and delete the existing one.

Now go back to the "Main" comp, select the "HUD Color" layer and in the Effect Controls window, pick the color for your holographic display.

That's all modifications you'll need for this project. Enjoy!
